Benefits

Built-in ATSC Digital Tuner delivers off-air reception of local HDTV and digital broadcasts with the simple addition of an antenna (sold separately).

A process that effectively marries film standards with video standards to allow optimum viewing regardless of the program source.

Higher performance scan velocity modulation & improved electronic guns resulting in sharp, high-resolution images, great detail & better transition between images.

Removes scan lines and reduces flicker and motion artifacts common in regular video signals. The result is a cleaner, smoother film-like image.

15W/Channel along with a built-in 30W sub-woofer allows for theatre quality sound from existing TV speakers - provides enhanced bass and low effects.

DVI-HDTV allows transmission of (uncompressed digital) video signals from a set-top box to a digital TV. DVI delivers the purest digital transmission available today.

Digitally optimizes convergence for the sharpest picture possible.
